1996-03 | male | Chinese

SUMMARY

Homepage: <https://www.ljwstruggle.com/> Github: <https://github.com/jiawei6636>

- Programming language: Python, C++.
- Deep learning: Tensorflow1.0/2.0 and Pytorch1.0. The main research directions are medical image segmentation and genome function prediction.
- Website Framework: Use Django to develop web application and deploy the application.
- Other skills: use Git and Github for version management, use the Linux operating system.

EDUCATION

Tianjin University	Sep 2021 - Jan 2025
Computer Science Doctor College of Intelligence and Computing	Tianjin
Tianjin University	Sep 2018 - Jan 2021
Computer Science Master School of Computer Science and Technology	Tianjin
• Top 5% of major Honor/Award: National Scholarship (Master)	
Tianjin University of Technology	Sep 2014 - Jun 2018
Computer Science Bachelor School of Computer Science and Technology	Tianjin
• Top 1% of major Honor/Award: National Scholarship (Bachelor)	

PROFESSIONAL EXPERIENCE

HUAWEI Technology	Feb 2021 - Aug 2021
R&D Engineer	Beijing
SANGFOR Technology	Jun 2020 - Aug 2020
R&D Engineer (Internship)	Shenzhen

PAPER

- **Jiawei Li**, Yuqian Pu, Jijun Tang, Quan Zou, Fei Guo. DeepATT: a hybrid category attention neural network for identifying functional effects of DNA sequences. Briefings in Bioinformatics. (SCI:1;CCF:B)
- **Jiawei Li**, Yuqian Pu, Jijun Tang, Quan Zou, Fei Guo. DeepAVP: a dual-channel deep neural network for identifying variable-length antiviral peptides. IEEE Journal of Biomedical and Health Informatics. (SCI:2;CCF:C)

OPEN SOURCE PROJECT

Tensorflow Brain Tumor Segmentation

Use the 3D-UNet algorithm with improved block , to segment the brain tumor with the 3D MRI image. **(In the experiment)**

- <https://github.com/jiawei6636/MImageSeg-MixUNet-BraTS>

Tensorflow DeepATT

The model that implemented with the self-attention mechanism by myself has achieved the SOTA in gene function recognition

- <https://github.com/jiawei6636/Bioinfor-DeepATT>

Tensorflow Retina Vessels Segmentation

Use the classic UNet algorithm to segment the retina vessels

- <https://github.com/jiawei6636/MImageSeg-UNet-Retina>
