Tianjin

Birthday: 1996-03 | male | Chinese

SUMMARY

Homepage: <https://www.ljwstruggle.com/> Github: <https://github.com/jiawei6636>

- Programming language: Python, C++.
- Deep learning: Tensorflow1.0/2.0 and Pytorch1.0. The main research directions are medical image segmentation and genome function prediction.
- Website Framework: Use Django to develop web application and deploy the application.
- Other skills: use Git and Github for version management, use the Linux operating system.

EDUCATION

Tianjin University

Sep 2018 - Jan 2021

Computer technology Master School of Computer Science and Technology

Tianjin

Tianjin University of Technology

Sep 2014 - Jun 2018

Computer Science and Technology Bachelor School of Computer Science and Technology

Tianjin

- GPA: 3.8/4.0 (top 1% of major)|Honor/Award: National Scholarship

PROFESSIONAL EXPERIENCE

SANGFOR

Jul 2020

Python development engineer (internship) Cloud computing department

Shenzhen

PAPER

- Jiawei Li, Yuqian Pu, Jijun Tang, Quan Zou, Fei Guo. DeepATT: a hybrid category attention neural network for identifying functional effects of DNA sequences. Briefings in Bioinformatics. (SCI:2;CCF:B)
- Jiawei Li, Yuqian Pu, Jijun Tang, Quan Zou, Fei Guo. DeepAVP: a dual-channel deep neural network for identifying variable-length antiviral peptides. IEEE Journal of Biomedical and Health Informatics. (SCI:2;CCF:C)

OPEN SOURCE PROJECT

Tensorflow DeepSEA

Using Tensorflow to implement the algorithm DeepSEA in bioinformatics

- <https://github.com/jiawei6636/Bioinfor-DeepSEA>

Tensorflow DanQ

Using Tensorflow to implement the algorithm DanQ in bioinformatics

- <https://github.com/jiawei6636/Bioinfor-DanQ>

Tensorflow DeepATT

The model that implemented with the self-attention mechanism by myself has achieved the SOTA in gene function recognition

- <https://github.com/jiawei6636/Bioinfor-DeepATT>

Tensorflow Retina Vessels Segmentation

Use the classic UNet algorithm to segment the retina vessels

- <https://github.com/jiawei6636/MImageSeg-UNet-Retina>

Tensorflow Brain Tumor Segmentation

Use the 3D-UNet algorithm with improved block , to segment the brain tumor with the 3D MRI image. (In the experiment)
